

HubSpot CRM Implementation

Your processes first. HubSpot second.

We design and implement HubSpot around the way your business actually works — connecting your marketing, sales and customer service teams, data and processes in one CRM.

More than a HubSpot setup

A CRM implementation shouldn't start with creating properties and pipelines.

It starts with questions:

- How does a lead become a customer?
- Who owns what — and when?
- Where does customer data come from?
- What should happen automatically?
- What does management need to know?

We map the answers first. Then we build the system.

“Insert a strong client quote here about the implementation, process or working with Actuado.”
--

What we implement

CRM architecture

Lifecycle stages, pipelines, data model, properties, associations, ownership, permissions and governance.

Marketing, Sales & Service

One CRM connecting the customer journey across teams — from first touch to sales opportunity and ongoing customer service.

Automation

Lead routing, notifications, follow-ups, handovers, data management and other repetitive processes that shouldn't depend on someone remembering to do them.

Data migration

Moving data from your existing CRM, marketing tools, spreadsheets or other sources — including mapping, cleaning, migration and validation.

Integrations

Connecting HubSpot with ERP systems, websites, telephony, prospecting platforms, configurators and other business-critical tools.

Reporting

Dashboards and reporting designed around the questions your teams and management actually need answered.

AI-ready foundation

Structured processes and reliable CRM data create the foundation for HubSpot AI, agents and future automation.

What does a typical implementation look like?

01 — Discover

Workshops, requirements and existing systems.

02 — Design

Processes, CRM architecture, data model and solution design.

03 — Build

HubSpot configuration, automation, migration and integrations.

04 — Test

Real-life use cases, data validation and user testing.

05 — Enable

Role-based training using your actual processes.

06 — Go live

Launch, support and continuous improvement.

3–6 months

How long does it take to implement HubSpot CRM?

A typical HubSpot CRM implementation takes **3 to 6 months**, depending on the number of teams, Hubs, processes, integrations and the complexity of the data migration.

From first workshop to go-live, we take care of the architecture, configuration, migration, automation, integrations, reporting and user enablement.

Results, not just configuration

Already using another CRM?

We can help you move to HubSpot without simply recreating your old CRM in a new system.

We have experience working with data and processes from platforms including:

Salesforce · Microsoft Dynamics · Pipedrive · ActiveCampaign · spreadsheets · custom systems

Migration is also an opportunity to decide what should be **kept, cleaned, redesigned or left behind.**

Why Actuado?

HubSpot Diamond Solutions Partner

HubSpot Onboarding Accredited

HubSpot partner since 2015

But certifications are only part of it.

We combine **business process consulting + HubSpot expertise + data + integrations + automation** in one implementation team.

That means you don't need one consultant to design the process, another company to configure HubSpot and a third developer to figure out how the systems should connect.

Frequently asked questions

What does a HubSpot CRM implementation include?

A typical implementation includes process and requirements workshops, CRM architecture, HubSpot configuration, data migration, automation, integrations, reporting, testing, user training and go-live support. The exact scope depends on your business processes and HubSpot subscription.

How long does a HubSpot implementation take?

Most of our CRM implementations take **3–6 months**. A focused implementation for one team can be faster, while multi-Hub implementations involving complex migrations or integrations may take longer.

What is the difference between HubSpot onboarding and CRM implementation?

HubSpot onboarding helps you get started with the platform. A CRM implementation goes deeper: we design how HubSpot should support your business processes and then configure the CRM, data structure, automation, reporting and integrations around those requirements.

Do we need to have our processes defined before we start?

No. Process design is part of our implementation approach. We work with your teams to understand the current process, identify gaps and agree on how it should work before configuring it in HubSpot.

Can you migrate our existing CRM to HubSpot?

Yes. We can migrate data from existing CRM and marketing platforms, spreadsheets and other systems. Migration typically includes data assessment, mapping, cleaning, migration and validation.

Can HubSpot integrate with our ERP or other business systems?

Usually, yes. We work with native HubSpot integrations as well as custom API integrations for ERP systems, websites, telephony, configurators and other business applications.

Can you implement several HubSpot Hubs at the same time?

Yes. We implement Marketing, Sales, Service, Content and Data Hub individually or as part of a connected multi-Hub implementation.

What happens after go-live?

We can continue working with your team through ongoing HubSpot support and continuous optimization — improving automation, reporting, data quality and processes as your business evolves.
